***Detailed Action***

***Status of the Claims***

Claims 1-7 are pending. Claims 1-7 are considered in this office action.

***Priority***

This application is a 371 of PCT/GB04/03497 dated August 16<sup>th</sup>, 2004, which claims priority to United Kingdom Patent application no. 0322917.6 dated September 30<sup>th</sup> 2003.

***Specification***

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicants' cooperation is requested in correcting any errors of which applicant may become aware of in the specification.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Regarding claim 1, the phrase "such as" and "for example" renders the claim indefinite because it is unclear whether the limitations following the phrase

Art Unit: 1621

are part of the claimed invention. See MPEP § 2173.05(d). Hence, Claim 1 and claims 2-6, which are dependent on claim 1, are rejected under 35 U.S.C. 112 second paragraph for the above reasons.

### ***Claim Objections***

The claims are objected to because the lines are crowded too closely together, making reading difficult. Substitute claims with lines one and one-half or double spaced on good quality paper are required. See 37 CFR 1.52(b).

Claim 7 is objected to the following reasons: In claim 7, the process steps (a), (b) and (c) are being crowded and too closely together. Applicants' are advised to rewrite the claim showing clearly all the steps on separate lines, according to the MPEP standards.

### ***Allowable Subject Matter***

Claims 1-6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The present invention is drawn to a process for producing R-2- (4-hydroxyphenoxy) propanoic acid or a salt, by the reaction of hydroquinone or a salt with a S-2-halopropanoic acid or a salt in the presence of mild reducing agent.

Art Unit: 1621

The present invention produces a product that is not contaminated by highly colored by-products in presence of a mild reducing agent, which is the key component of the invention and thus free of prior art.
